GDB QUICK REFERENCE GDB Version 5

Essential Commands

gdb *program* [*core*]	debug *program* [using coredump *core*]
b [*file*:]*function*	set breakpoint at *function* [in *file*]
run [*arglist*]	start your program [with *arglist*]
bt	backtrace: display program stack
p *expr*	display the value of an expression
c	continue running your program
n	next line, stepping over function calls
s	next line, stepping into function calls

Starting GDB

gdb	start GDB, with no debugging files
gdb *program*	begin debugging *program*
gdb *program core*	debug coredump *core* produced by *program*
gdb --help	describe command line options

Stopping GDB

quit	exit GDB; also q or EOF (eg C-d)
INTERRUPT	(eg C-c) terminate current command, or send to running process

Getting Help

help	list classes of commands
help *class*	one-line descriptions for commands in *class*
help *command*	describe *command*

Executing your Program

run *arglist*	start your program with *arglist*
run	start your program with current argument list
run ... <*inf* >*outf*	start your program with input, output redirected
kill	kill running program
tty *dev*	use *dev* as stdin and stdout for next run
set args *arglist*	specify *arglist* for next run
set args	specify empty argument list
show args	display argument list
show env	show all environment variables
show env *var*	show value of environment variable *var*
set env *var string*	set environment variable *var*
unset env *var*	remove *var* from environment

Shell Commands

cd *dir*	change working directory to *dir*
pwd	Print working directory
make ...	call "make"
shell *cmd*	execute arbitrary shell command string

[ ] surround optional arguments   ... show one or more arguments

Breakpoints and Watchpoints

break [*file*:]*line* b [*file*:]*line*	set breakpoint at *line* number [in *file*] eg: break main.c:37
break [*file*:]*func*	set breakpoint at *func* [in *file*]
break +*offset* break -*offset*	set break at *offset* lines from current stop
break *addr	set breakpoint at address *addr*
break	set breakpoint at next instruction
break ... if *expr*	break conditionally on nonzero *expr*
cond *n* [*expr*]	new conditional expression on breakpoint *n*; make unconditional if no *expr*
tbreak ...	temporary break; disable when reached
rbreak *regex*	break on all functions matching *regex*
watch *expr*	set a watchpoint for expression *expr*
catch *event*	break at *event*, which may be catch, throw, exec, fork, vfork, load, or unload.
info break	show defined breakpoints
info watch	show defined watchpoints
clear	delete breakpoints at next instruction
clear [*file*:]*fun*	delete breakpoints at entry to *fun*()
clear [*file*:]*line*	delete breakpoints on source line
delete [*n*]	delete breakpoints [or breakpoint *n*]
disable [*n*]	disable breakpoints [or breakpoint *n*]
enable [*n*]	enable breakpoints [or breakpoint *n*]
enable once [*n*]	enable breakpoints [or breakpoint *n*]; disable again when reached
enable del [*n*]	enable breakpoints [or breakpoint *n*]; delete when reached
ignore *n count*	ignore breakpoint *n*, *count* times
commands *n* [silent] *command-list*	execute GDB *command-list* every time breakpoint *n* is reached. [silent suppresses default display]
end	end of *command-list*

Program Stack

backtrace [*n*] bt [*n*]	print trace of all frames in stack; or of *n* frames—innermost if *n*>0, outermost if *n*<0
frame [*n*]	select frame number *n* or frame at address *n*; if no *n*, display current frame
up *n*	select frame *n* frames up
down *n*	select frame *n* frames down
info frame [*addr*]	describe selected frame, or frame at *addr*
info args	arguments of selected frame
info locals	local variables of selected frame
info reg [*rn*]...	register values [for regs *rn*] in selected frame; all-reg includes floating point
info all-reg [*rn*]	

Execution Control

continue [*count*] c [*count*]	continue running; if *count* specified, ignore this breakpoint next *count* times
step [*count*] s [*count*]	execute until another line reached; repeat *count* times if specified
stepi [*count*] si [*count*]	step by machine instructions rather than source lines
next [*count*] n [*count*]	execute next line, including any function calls
nexti [*count*] ni [*count*]	next machine instruction rather than source line
until [*location*]	run until next instruction (or *location*)
finish	run until selected stack frame returns
return [*expr*]	pop selected stack frame without executing [setting return value]
signal *num*	resume execution with signal *s* (none if 0)
jump *line*	resume execution at specified *line* number or *address*
jump *address	
set var=*expr*	evaluate *expr* without displaying it; use for altering program variables

Display

print [/*f*] [*expr*] p [/*f*] [*expr*]	show value of *expr* [or last value $] according to format *f*:
x	hexadecimal
d	signed decimal
u	unsigned decimal
o	octal
t	binary
a	address, absolute and relative
c	character
f	floating point
call [/*f*] *expr*	like print but does not display void
x [/*Nuf*] *expr*	examine memory at address *expr*; optional format spec follows slash
N	count of how many units to display
u	unit size; one of
	b individual bytes
	h halfwords (two bytes)
	w words (four bytes)
	g giant words (eight bytes)
f	printing format. Any print format, or
	s null-terminated string
	i machine instructions
disassem [*addr*]	display memory as machine instructions

Automatic Display

display [/*f*] *expr*	show value of *expr* each time program stops [according to format *f*]
display	display all enabled expressions on list
undisplay *n*	remove number(s) *n* from list of automatically displayed expressions
disable disp *n*	disable display for expression(s) number *n*
enable disp *n*	enable display for expression(s) number *n*
info display	numbered list of display expressions

Expressions

expr	an expression in C, C++, or Modula-2 (including function calls), or:
addr@*len*	an array of *len* elements beginning at *addr*
file::*nm*	a variable or function *nm* defined in *file*
{*type*}*addr*	read memory at *addr* as specified *type*
$	most recent displayed value
$*n*	*n*th displayed value
$$	displayed value previous to $
$$*n*	*n*th displayed value back from $
$_	last address examined with x
$__	value at address $_
$*var*	convenience variable; assign any value
show values [*n*]	show last 10 values [or surrounding $*n*]
show conv	display all convenience variables

Symbol Table

info address *s*	show where symbol *s* is stored
info func [*regex*]	show names, types of defined functions (all, or matching *regex*)
info var [*regex*]	show names, types of global variables (all, or matching *regex*)
whatis [*expr*]	show data type of *expr* [or $] without evaluating; ptype gives more detail
ptype [*expr*]	
ptype *type*	describe type, struct, union, or enum

GDB Scripts

source *script*	read, execute GDB commands from file *script*
define *cmd* command-list	create new GDB command *cmd*; execute script defined by *command-list*
end	end of *command-list*
document *cmd* help-text	create online documentation for new GDB command *cmd*
end	end of *help-text*

Signals

handle *signal act*	specify GDB actions for *signal*:
print	announce signal
noprint	be silent for signal
stop	halt execution on signal
nostop	do not halt execution
pass	allow your program to handle signal
nopass	do not allow your program to see signal
info signals	show table of signals, GDB action for each

Debugging Targets

target *type param*	connect to target machine, process, or file
help target	display available targets
attach *param*	connect to another process
detach	release target from GDB control

Controlling GDB

set *param value*	set one of GDB's internal parameters
show *param*	display current setting of parameter

Parameters understood by set and show:

complaint *limit*	number of messages on unusual symbols
confirm *on/off*	enable or disable cautionary queries
editing *on/off*	control readline command-line editing
height *lpp*	number of lines before pause in display
language *lang*	Language for GDB expressions (auto, c or modula-2)
listsize *n*	number of lines shown by list
prompt *str*	use *str* as GDB prompt
radix *base*	octal, decimal, or hex number representation
verbose *on/off*	control messages when loading symbols
width *cpl*	number of characters before line folded
write *on/off*	Allow or forbid patching binary, core files (when reopened with exec or core)
history ... h ...	groups with the following options:
h exp *off/on*	disable/enable readline history expansion
h file *filename*	file for recording GDB command history
h size *size*	number of commands kept in history list
h save *off/on*	control use of external file for command history
print ... p ...	groups with the following options:
p address *on/off*	print memory addresses in stacks, values
p array *off/on*	compact or attractive format for arrays
p demangl *on/off*	source (demangled) or internal form for C++ symbols
p asm-dem *on/off*	demangle C++ symbols in machine-instruction output
p elements *limit*	number of array elements to display
p object *on/off*	print C++ derived types for objects
p pretty *off/on*	struct display: compact or indented
p union *on/off*	display of union members
p vtbl *off/on*	display of C++ virtual function tables
show commands	show last 10 commands
show commands *n*	show 10 commands around number *n*
show commands +	show next 10 commands

Working Files

file [*file*]	use *file* for both symbols and executable; with no arg, discard both
core [*file*]	read *file* as coredump; or discard
exec [*file*]	use *file* as executable only; or discard
symbol [*file*]	use symbol table from *file*; or discard
load *file*	dynamically link *file* and add its symbols
add-sym *file addr*	read additional symbols from *file*, dynamically loaded at *addr*
info files	display working files and targets in use
path *dirs*	add *dirs* to front of path searched for executable and symbol files
show path	display executable and symbol file path
info share	list names of shared libraries currently loaded

Source Files

dir *names*	add directory *names* to front of source path
dir	clear source path
show dir	show current source path
list	show next ten lines of source
list -	show previous ten lines
list *lines*	display source surrounding *lines*, specified as:
[*file*:]*num*	line number [in named file]
[*file*:]*function*	beginning of function [in named file]
+*off*	*off* lines after last printed
-*off*	*off* lines previous to last printed
address	line containing *address*
list *f*,*l*	from line *f* to line *l*
info line *num*	show starting, ending addresses of compiled code for source line *num*
info source	show name of current source file
info sources	list all source files in use
forw *regex*	search following source lines for *regex*
rev *regex*	search preceding source lines for *regex*

GDB under GNU Emacs

M-x gdb	run GDB under Emacs
C-h m	describe GDB mode
M-s	step one line (step)
M-n	next line (next)
M-i	step one instruction (stepi)
C-c C-f	finish current stack frame (finish)
M-c	continue (cont)
M-u	up *arg* frames (up)
M-d	down *arg* frames (down)
C-x &	copy number from point, insert at end
C-x SPC	(in source file) set break at point

GDB License

show copying	Display GNU General Public License
show warranty	There is NO WARRANTY for GDB. Display full no-warranty statement.
